Aditi Sharma QA Lead

Carpinteria, CA · aditi.sharma@gmail.com · +1 805-555-0118 · linkedin.com/in/aditisharma

PROFILE SUMMARY

- **QA Lead** with **6 years** in software testing, leading a **4-person QA team** since 2023 for the daily log and timesheet features in Procore's web and mobile apps, after starting out as an SDET.
- Writes and reviews test code every week: automation (**Playwright**, **Appium**), API tests (REST Assured), test management (**TestRail**, Jira), CI (GitHub Actions) and real device runs on BrowserStack.
- Strongest in the basics of a first lead role: **test plans by risk**, **release regression**, **flaky test cleanup** and **bug triage**, with a weekly quality report to the engineering manager.
- Plans every sprint with 2 engineering managers and the field tools product manager, and works with customer support on bugs that reach superintendents on job sites.
- Runs weekly 1:1s with 4 QA engineers, wrote the QA onboarding checklist for the group, and has sat on the hiring loop for every SDET role in Field Productivity since 2024.

TECHNICAL SKILLS

Test Management & Tracking:	TestRail, Jira, Confluence
Test Automation:	Playwright, Appium, REST Assured, pytest
CI/CD & Test Infrastructure:	GitHub Actions, Docker, BrowserStack
Performance & Monitoring:	k6, Datadog, Sentry
QA Methods & Process:	Risk-Based Testing, Exploratory Testing, Agile/Scrum
People & Vendor Management:	1:1s, Hiring Loops, Onboarding Plans, Mentoring
Languages & Reporting:	Python, TypeScript, SQL, Jira Dashboards

EDUCATION

The University of Texas at Austin — **B.S. in Computer Science** — Austin, TX · Aug 2016 to May 2020

ISTQB — **Certified Tester Foundation Level (CTFL)** — 2021

WORK EXPERIENCE

Procore — **QA Lead, Field Productivity** — Carpinteria, CA · Mar 2023 to Present

- Lead a 4-person QA team for daily logs and timesheets, writing a risk-based test plan for every release and cutting manual regression from 3 days to **1 day**.
- Grew the Playwright suite for the web app from 300 to **1,100** tests and made it a required check in GitHub Actions on every pull request.
- Set up Appium tests on BrowserStack across 12 iOS and Android devices that crews use on site, catching **17** device-specific bugs before release in 2025.
- Run the release readiness check for the field apps every 2 weeks from a Jira dashboard of open bugs by severity, and brought escaped P1 and P2 bugs from 9 a quarter to **3**.
- Added QA to story kickoffs with 2 engineering teams, so testability questions get answered before anyone writes code, and reopened tickets dropped by **40%**.

Demandbase — **SDET** — San Francisco, CA · Aug 2020 to Feb 2023

- Built REST Assured API tests for 14 services in the account intelligence platform, running in Jenkins on every merge, and caught **26** breaking API changes before staging.
- Cut flaky Cypress failures from 11% of runs to **3%** in one quarter by removing fixed waits and resetting test accounts to clean data before each run.
- Kept SOC 2 test evidence for every release in TestRail for the yearly audit, with **0** testing findings in 2022.
