# Noor Al-Hakim Junior Vue Developer

Kaunas, Lithuania · noor.alhakim@gmail.com · +370 655 50142 · linkedin.com/in/nooralhakim

## PROFILE SUMMARY

- **Junior Vue Developer** with **3 years** in web development, the last 2 on Hostinger's **drag-and-drop site editor**, after a year building **classifieds listing pages** at OpenSooq in Amman.
- Writes **Vue 3** with **script setup** and **TypeScript**, keeps editor state in **Pinia**, styles with **Tailwind CSS**, and tests with **Vitest** and **Vue Test Utils**.
- Strongest on **small reusable editor blocks** and the **composables** behind drag, resize and undo, and runs **Lighthouse** plus a keyboard-only check on every change before review.
- Ships with a squad of **4 developers, a designer and a QA engineer**, demos work at the end of each sprint, and agrees **API response shapes** with the back-end developer before a feature starts.
- Wrote the team's **Options API to script setup checklist**, answers newcomers' questions about **Pinia**, and is learning **Nuxt 4** server routes on a side project.

## TECHNICAL SKILLS

| | |
|---|---|
| **Vue & Nuxt:** | Vue 3, Composition API, script setup, Vue Router, Nuxt 4 (basics), Options API |
| **Languages:** | TypeScript, JavaScript, HTML, CSS |

| **UI Kits & Styling:** | Tailwind CSS, PrimeVue, scoped CSS, Storybook (basics) |
| **Testing:** | Vitest, Vue Test Utils, Playwright (basics) |
| **Build & Tooling:** | Vite, vue-tsc, ESLint, Git, GitHub Actions |
| **Performance, SEO & Accessibility:** | Lighthouse, Core Web Vitals, WCAG 2.2 AA, axe DevTools |

## EDUCATION

**University of Jordan** — **B.Sc. in Computer Science** — Amman, Jordan · Sep 2019 to Jun 2023

## WORK EXPERIENCE

**Hostinger** — **Front-End Developer** — Kaunas, Lithuania · Jul 2024 to Present

- Built **23** section blocks for the site editor in **Vue 3**, such as pricing tables, galleries and contact forms, on one shared block shell with typed props and slots.
- Wrote composables for drag, resize and undo with ref, computed and **VueUse**, replacing logic copied across 14 components and cutting editor bug reports from 31 a month to **12**.
- Moved the page settings panel from a Vuex module to a **Pinia** store with typed actions, fixing settings that reset after undo and closing **17** open tickets in one sprint.
- Rewrote **26** Options API components in the template gallery with **script setup** and TypeScript, cutting the gallery's code by about a third with no visual changes.
- Added **Vitest** and Vue Test Utils tests for the block shell and its composables, raising test coverage on editor code from 38% to **74%** in 2 quarters.

**OpenSooq** — **Junior Web Developer** — Amman, Jordan · Jul 2023 to Jun 2024

- Lazy-loaded image galleries on listing pages and rebuilt the filters as a small **Vue 3** widget, cutting mobile load time on a throttled 3G test from 5.2 s to **2.9 s**.
- Connected the saved searches page to the REST API with loading, empty and error states, and added retries that brought failed saves **under 1%**.
- Built **8** prerendered city landing pages in **Nuxt** for the cars section, which grew organic visits to those listings by a third in their first quarter.
